MailXaminer™

Simplifying Email Forensics

CloudXaminer

for Cloud Platforms

CloudXaminer is a cloud-based email forensics and eDiscovery tool developed by SysTools Software, the same company behind MailXaminer. It offers many of the same features and capabilities as MailXaminer, but with the added benefit of being a cloud-based email forensics solution.

Dedicated Tool for
Cloud Mail Forensics

With CloudXaminer, users can perform email data extraction, advanced searching, filtering, analysis, and reporting, all from a web-based interface. The software supports a variety of webmail clients, including **Gmail, GSuite, Hotmail, Microsoft 365, Yahoo, iCloud, Rackspace, etc.**

One of the key benefits of CloudXaminer is its flexibility and scalability. As a cloud-based solution, it can easily handle large volumes of email data and is accessible from anywhere with an internet connection. Users can scale up or down as needed, without the need for additional hardware or software.

CLOUD

Perform Email Examination for Multiple Cloud Platforms

| Gmail | GSuite | Hotmail | IMAP | Live Exchange | Live@EDU | Microsoft 365 |

| Yahoo | Zoho | iCloud | Rackspace |

Overall, CloudXaminer is a powerful and flexible email forensics and eDiscovery tool that provides users with the convenience and scalability of a cloud-based solution. Its advanced features, ease of use, and security make it a popular choice for legal and investigative professionals who need to handle email evidence in a defensible and compliant manner.
