MailXaminer™

Simplifying Email Forensics

MailClientXaminer
for Offline Email Clients

MailClientXaminer is an email forensics and eDiscovery tool developed by SysTools Software, the same company behind MailXaminer. It offers many of the same features and capabilities as MailXaminer, but with the added benefit of being an offline email client forensics solution.

Dedicated Tool for
Offline Email Client Forensics

MailClientXaminer is designed to help forensic investigators and digital forensic experts recover and analyze email data from various email clients, including **Microsoft Outlook, Apple Mail, Mozilla Thunderbird,** and several others. It can also extract data from email formats such as **PST, OST, MBOX, EML, and MSG.**

SYSTOOLS MAIL CLIENT FORENSICS
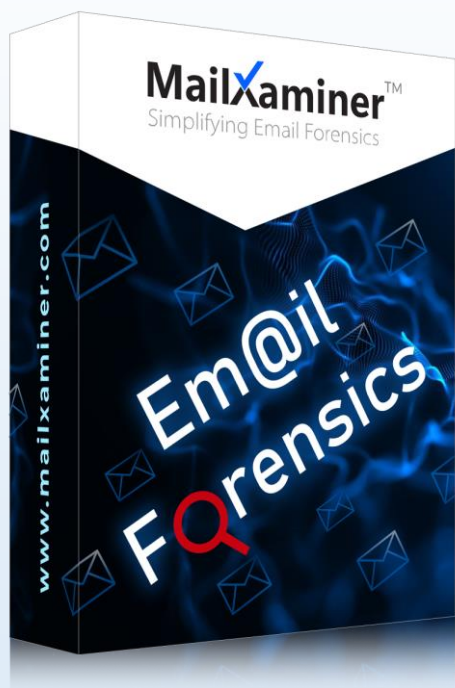

SysTools®
Simplifying Technology

The software provides users with powerful features such as advanced search and filtering, metadata analysis, email threading, and link analysis to help them conduct comprehensive email investigations efficiently. It can also recover deleted emails, attachments, and contacts, which can be crucial in investigations.

EMAIL CLIENT
Examine Email Evidence from Various Email Clients

Apple Mail	Communigate Mail Server	EML/EMLX	Eudora Database	Exchange Offline Storage	Google Takeout	IncrediMail 2.0	LEF Processed Emails	Lotus Notes
