# MailXaminer™

Simplifying Email Forensics

Em@il Forensics

#1 Email Forensics Tool

MailXaminer is a powerful email forensics and eDiscovery tool designed to help investigators, auditors, and legal professionals collect, search, analyze, and produce email evidence in a legally defensible manner. The software is developed by **SysTools Software Pvt. Ltd**, a company that specializes in providing data recovery, email migration, and digital forensics solutions.

1 MailXaminer Investigator

**2** MailXaminer Team

Supports emails from following:

- Desktop Clients
- Email Files
- Email Server
- Webmail Clients
- Cloud Email
- Disk Image

With MailXaminer, users can easily extract email data from a variety of sources, including email clients, servers, webmail services, and cloud platforms. The tool supports popular email formats such as **PST, OST, EDB, MBOX, MSG, and EML,** making it highly versatile and adaptable to different email environments.

In addition, MailXaminer offers robust reporting and collaboration features that enable users to share findings with team members, stakeholders, or clients. The software generates comprehensive reports that include all relevant email data, metadata, and analysis results. It also supports exporting data in various formats, including **PDF, and CSV,** among others.
EMAIL CLIENT

## Examine Email Evidence from Various Email Clients

MAILXAMINER INVESTIGATOR v/s TEAM

SysTools®
Simplifying Technology

MailXaminer is a highly effective and reliable email forensics and eDiscovery tool that can help organizations uncover crucial email evidence quickly and efficiently. Its advanced features, ease of use, and scalability make it a popular choice for legal and investigative professionals who need to handle email evidence in a defensible and compliant manner.

MAILXAMINER INVESTIGATOR

The **Investigator version** of MailXaminer is designed for individual users or small teams who need to conduct email investigations and eDiscovery on a regular basis. It includes all the core features of the software, such as email data extraction, advanced search, filtering, analysis, and reporting, but does not offer the collaboration tools and case management features of the Team version.

VISIT GUIDE ➤

MAILXAMINER TEAM

The **Team version** of MailXaminer is designed for organizations that need to collaborate on email investigations and eDiscovery projects. It offers all the features of the Investigator version, as well as additional collaboration tools, such as user roles and permissions, case management, and team-based reporting. The Team version allows multiple users to work on the same case simultaneously, and it also supports the creation of custom workflows and templates to streamline the investigation process.
